**NEW QUESTION: 1**

You have installed a Cisco Unified IP 8831 Conference Phone that is failing to register.

Which two actions must you take to troubleshoot the problem? (Choose two)

- A. Disable HSRP on the access layer switch.
- B. Check the RJ-65 cable.
- C. Verify that the phone's network can access the option 150 server.
- D. Verify that the RJ-11 cable is plugged into the PC port.
- E. Verify that the correct drivers are installed on the switch

port of the phone.

**F.** Verify that the switch port of the phone is enabled.

**Answer: C,F**

**NEW QUESTION: 2**

You have the following code. (Line numbers are included for reference only).

You need to complete the WriteTextAsync method. The solution must ensure that the code is not blocked while the file is being written.

Which code should you insert at line 12?

**A.** Option B

**B.** Option A

**C.** Option C

**D.** Option D

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

```
await sourceStream.WriteAsync(encodedText, 0,
encodedText.Length);
```

The following example has the statement `await sourceStream.WriteAsync(encodedText, 0, encodedText.Length);`, which is a contraction of the following two statements:

```
Task theTask = sourceStream.WriteAsync(encodedText, 0,
encodedText.Length); await theTask;
```

Example: The following example writes text to a file. At each `await` statement, the method immediately exits. When the file I/O is complete, the method resumes at the statement that follows the `await` statement.

Note that the `async` modifier is in the definition of methods that use the `await` statement.

```
public async void ProcessWrite()
{
    string filePath = @"temp2.txt";
    string text = "Hello World\r\n";
    await WriteTextAsync(filePath, text);
}
private async Task WriteTextAsync(string filePath, string text)
{
    byte[] encodedText = Encoding.Unicode.GetBytes(text);
    using (FileStream sourceStream = new FileStream(filePath,
        FileMode.Append, FileAccess.Write, FileShare.None,
        bufferSize: 4096, useAsync: true))
    {
        await sourceStream.WriteAsync(encodedText, 0,
            encodedText.Length);
    };
}
```

Reference: Using Async for File Access (C# and Visual Basic)
