- B. Data link encryption
- C. Mandatory Access Control (MAC) procedures
- D. Discretionary Access Control (DAC) procedures

Answer: C

NEW QUESTION: 2

Which of the following reduces the probability of potential consequences of project risk events?

- A. Preventive action

- B. Risk management
- C. Corrective action
- D. Defect repair

Answer: A

Explanation:

Explanation/Reference:

Explanation:

4.3.3.3 Change Requests

A change request is a formal proposal to modify any document, deliverable, or baseline. An approved change request will replace the associated document, deliverable, or baseline and may result in an update to other parts of the project management plan. When issues are found while project work is being performed, change requests are submitted, which may modify project policies or procedures, project scope, project cost or budget, project schedule, or project quality. Other change requests cover the needed preventive or corrective actions to forestall negative impact later in the project. Requests for a change can be direct or indirect, externally or internally initiated, and can be optional or legally/contractually mandated, and may include:
 Corrective action-An intentional activity that realigns the performance of the project work with the

project management plan;

Preventive action-An intentional activity that ensures the future performance of the project work is

aligned with the project management plan;

Defect repair-An intentional activity to modify a nonconforming product or product component;

Updates-Changes to formally controlled project documents, plans, etc., to reflect modified or additional

ideas or content.

NEW QUESTION: 3

A company is looking for a managed database service that can be used to store and retrieve data for its applications. The service should be able to scale up and down as needed and should be able to integrate with other AWS services. Which of the following services is the best choice for this use case?

- A. Amazon ElastiCache
- B. Amazon Redshift
- C. Amazon RDS
- D. Amazon DynamoDB

Answer: C

Explanation:

Explanation

Amazon Relational Database Service (Amazon RDS) makes it easy to set up, operate, and scale a relational database in the cloud. It provides cost-efficient and resizable capacity while automating time-consuming administration tasks such as hardware

provisioning, database setup, patching and backups. It frees you to focus on your applications so you can give them the fast performance, high availability, security and compatibility they need.
