But passing Oracle certification 1z1-071 exam is not so simple.

NEW QUESTION: 1
Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 and a server named Server2 that runs Windows Server 2008 R2 Service Pack 1 (SP1). Both servers are member servers.
On Server2, you install all of the software required to ensure that Server2 can be managed remotely from Server Manager.
You need to ensure that you can manage Server2 from Server1 by using Server Manager.
Which two tasks should you perform on Server2? (Each correct answer presents part of the solution. Choose two.)
A. Run the Enable-PsSessionConfigurationcmdlet.
B. Run the systempropertiesremote.execommand.
C. Run the Set-ExecutionPolicycmdlet.
D. Run the Fnable-PsRemotingcmdlet.
E. Run the Confiqure-SMRemoting.ps1script.

Answer: C,E
Explanation:
To configure Server Manager remote management by using Windows PowerShell On the computer that you want to manage remotely, open a Windows PowerShell session with elevated user rights. To do this, click Start, click All Programs, click Accessories, click Windows PowerShell, right-click the Windows PowerShell shortcut, and then click Run as administrator. In the Windows PowerShell session, type the following, and then press Enter. Set-ExecutionPolicy -ExecutionPolicyRemoteSigned Type the following, and then press Enter to enable all required firewall rule exceptions. Configure-SMRemoting.ps1 -force -enable http://technet.microsoft.com/en-us/library/dd759202.aspx
A) Run the systempropertiesremote.exe command B) Enable-PSRemotingcmdlet configures the computer to receive Windows PowerShell remote commandsthat are sent by using the WS-Management technology. C) Enable-PSSessionConfigurationcmdlet enables registered session configurations that have been disabled. D) Configure-SMRemoting.ps1 -force -enable E) Set-ExecutionPolicy -ExecutionPolicyRemoteSigned To configure Server Manager remote management by using Windows PowerShell On the computer that you want to manage remotely, open a Windows PowerShell session with elevated userrights, type the following: C:\Documents and Settings\usernwz1\Desktop\1.JPG

To configure Server Manager remote management by using Windows PowerShell. On the computer that youwant to manage remotely, open a Windows PowerShell session with elevated user rights. To do this, click Start, click All Programs, click Accessories, click Windows PowerShell, right-click the WindowsPowerShell shortcut, and then click Run as administrator. In the Windows PowerShell session, type thefollowing, and then press Enter. NEW QUESTION: 2

A. Option B
B. Option F
C. Option E
D. Option C
E. Option A
F. Option D
Answer: A,B,F
Explanation:
Explanation

The ports on the switch are not up indicating it is a layer 1 (physical) problem so we should check cable type, power and how they are plugged in.

NEW QUESTION: 3
Scenario: A Citrix Administrator of a Linux environment needs to load-balance the web servers in an environment However, due to budget constraints, the administrator is NOT able to implement a full-scale solution.
What can the administrator do to load-balance the web servers in this scenario?
A. Install NetScaler VPX.
B. Install a NetScaler CPX.
C. Purchase NetScaler MPX.
D. Purchase a NetScaler SDX.
Answer: B

NEW QUESTION: 4
An IS auditor finds that, in accordance with IS policy, IDs of terminated users are deactivated within 90 days of termination. The IS auditor should:
A. recommend that activity logs of terminated users be reviewed on a regular basis.
B. report that the control is operating effectively since deactivation happens within the time frame stated in the IS policy.
C. recommend changes to the IS policy to ensure deactivation of user IDs upon termination.
D. verify that user access rights have been granted on a need-to-have basis.
Answer: C
Explanation:
Although a policy provides a reference for performing IS audit assignments, an IS auditor needs to review the adequacy and the appropriateness of the policy. If, in the opinion of the auditor, the time frame defined for deactivation is inappropriate,the auditor needs to communicate this to management and recommend changes to the policy. Though the deactivation happens as stated
in the policy, it cannot be concluded that the control is effective. Best practice would require that the ID of a terminated user be deactivated immediately. Verifying that user access rights have been granted on a need-to-have basis is necessary when permissions are granted. Recommending that activity logs of terminated users be reviewed on a regular basis is a good practice, but not as effective as deactivation upon termination.
