Answer: B

NEW QUESTION: 3

SIMULATION

The headquarter offices for a book retailer are enhancing their wiring closets with Layer3 switches. The new distribution-layer switch has been installed and a new access-layer switch cabled to it. Your task is to configure VTP to share VLAN information from the distribution-layer switch to the access-layer devices. Then, it is necessary to configure interVLAN routing on the distribution layer switch to route traffic between the different VLANs that are configured on the access-layer switches; however, it is not necessary for you to make the specific VLAN port assignments on the access-layer switches. Also, because VLAN database mode is being deprecated by Cisco, all VLAN and VTP configurations are to be completed in the global configuration mode.

Please reference the following table for the VTP and VLAN information to be configured:

These are your specific tasks:

1. Configure the VTP information with the distribution layer switch as the VTP server.
2. Configure the VTP information with the access layer switch as a VTP client.
3. Configure VLANs on the distribution layer switch.
4. Configure inter-VLAN routing on the distribution layer switch.
5. Specific VLAN port assignments will be made as users are

added to the access layer switches in the future.

6. All VLANs and VTP configurations are to be completed in the global configuration. To configure the switch, click on the host icon that is connected to the switch by way of a serial console cable.

Answer:

Explanation:

See Explanation below.

Explanation/Reference:

Explanation:

1) Configure the VTP information with the distribution layer switch as the VTP server:

```
DLSwitch#configure terminal
```

```
DLSwitch(config)#vtp mode server
```

```
DLSwitch(config)#vtp domain cisco (use cisco, not CISCO because it is case sensitive)
```

2) Configure the VTP information with the access layer switch as a VTP client

```
ALSwitch#configure terminal
```

```
ALSwitch(config)#vtp mode client
```

```
ALSwitch(config)#vtp domain cisco
```

```
ALSwitch(config)#exit
```

3) Configure VLANs on the distribution layer switch

To create VLANs on a switch, use the `vlan vlanID#` command:

```
DLSwitch(config)#vlan 20
```

```
DLSwitch(config)#vlan 21
```

Configure IP addresses for VLANs:

```
DLSwitch(config)#interface vlan 20
```

```
DLSwitch(if-config)#ip address 172.16.71.1 255.255.255.0
```

```
DLSwitch(if-config)#no shutdown
```

```
DLSwitch(config)#interface vlan 21
```

```
DLSwitch(if-config)#ip address 172.16.132.1 255.255.255.0
```

```
DLSwitch(if-config)#no shutdown
```

```
DLSwitch(if-config)#exit
```

4) Configure inter-VLAN routing on the distribution layer switch

```
DLSwitch(config)#ip routing
```

```
DLSwitch(config)#exit
```

```
DLSwitch#copy running-config startup-config
```

```
ALSwitch#copy running-config startup-config
```
