- E. Level 1 backup on Tuesday, Thursday, and Friday contains all the blocks that have been changed since the last level 0

backup.

Answer: A,B,D

NEW QUESTION: 3

Which of the following datatypes generates a consecutive number that can be used as the primary key of a table?

- A. Hyperlink
- B. AutoNumber
- C. OLE Object
- D. Currency

Answer: B

Explanation:

The AutoNumber datatype is used for inserting a number automatically and incrementing it by one when a new record is inserted in a table. The increment can be changed through the New Values property. This property has the following two values:

Increment

Random

The AutoNumber datatype generates a consecutive number that can be used as the primary key of a table. Answer option C is incorrect. The Currency datatype is used to store monetary values. The format of the currency can be changed by using the Format property. The various formats of the Currency datatype are as follows:

- * General Number
- * Currency
- * Euro
- * Fixed
- * Standard
- * Percent
- * Scientific

Answer option D is incorrect. The Hyperlink datatype is used to store a hyperlink that is linked to a Web page or to a local or network file. It can store 1GB of data. Any type of file can be linked through this datatype. Each row of a table contains only one hyperlink.

Answer option A is incorrect. The OLE Object datatype is used to attach files and add binary data to a table. This datatype stores each data in a bitmap format. This results in an increase in the size of a database file. Only a single file can be added to each row of a table. The files attached can be Microsoft Office files, graphics files, sound files, pdf files, etc.

Objective: Table Design

NEW QUESTION: 4

Click the Exhibit button.

An administrator is creating a vApp for a multi-tiered web application. The vApp has been configured as shown in the exhibit. Testing of the vApp indicates that attempts to communicate with the web server on Dev_Web_01 fail. The developer wants to be sure the database server OS is completely started before the other servers power on. The developer also wants to minimize recovery time.

What changes to the vApp configuration will correct the issues?

A. Move the Dev_Web_01 virtual machine to Group 3, decrease the time value and check VMware Tools are ready

B. Move the Dev_App_01 virtual machine to Group 1 and increase the time value

C. Move the Dev_Web_01 virtual machine to Group 3, increase the time value and check VMware Tools are ready

D. Move the Dev_Web_01 virtual machine to Group 3 and increase the time value

Answer: C

Explanation:

By setting it up like D, the Web server is started first, then 120 seconds later SQL, and 120 seconds after that App. By selecting A, it will only affect when Dev_App_01 starts...either 120 seconds or when VMware Tools is ready which would only start the VM even sooner once it detects VMware tools on the first two servers...if VMware tools is even installed on them.
