Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The design has a primary zone and three satellite zones. Each satellite zone has a number of Virtual Delivery Agent (VDA) machines that belong to a single Delivery Group spanning across all three satellite zones.
Click the Exhibit button for more details about the configuration.

How should the architect ensure that the SharePoint application has optimal performance for all the user groups?
**A.** Edit the application properties to set Zone-SFO as the home zone for SharePoint.
**B.** Edit the zone properties to only allow SharePoint to launch in Zone-SFO.
**C.** Publish SharePoint in an individual Delivery Group within each zone.
**D.** Use PowerShell to change the process priority to "high" for SharePoint within Zone-SFO.
**Answer: D**

**NEW QUESTION: 3**
Scenario
Following the merger of two financial companies, management is considering combining the two
distinct customer call centers into a single physical location. In addition to the overall call center
headcount increasing by 30%, the support for two distinct customer bases presents the potential
of having two different desktop PCs on the desk of each call center employee. Instead of
correspondingly increasing IT support headcount to manage the single, larger call center and call
center infrastructure, management believes they can reduce the required time to support call
center operations by 40% if they employ virtual desktop technology.
An initial assessment has identified the need for a centralized storage solution that could support
500 virtual desktops running a variety of applications that can scale quickly to accommodate an
expected increase in call center staff. The customer is already an HP Blade System customer
using HP Virtual Connect Flex-10.
Some of the additional business criteria identified in customer planning interviews includes:
-Use client virtualization for the desktops.
-Achieve the highest possible density and performance for the virtual desktops,but keep the
virtual desktop storage traffic off the network due to a current, existing limitation of only 1GbE. -Do not use
standalone, network-attached storage. -Limit the impact of

additional rack space. -Minimize the risk of additional help-desk tickets. -Present multiple solutions, prioritized with a recommendation.
Refer to the scenario.
Your proposed design includes a VMware View environment using HP storeVirtual 4800. What has to be considered when designing a solution?
**A.** Avoid boot storms and insufficient response times during critical shift change hours.
**B.** Offer asynchronous replication to keep the virtual desktops up and running in case of a component failure.
**C.** Use VMware View provisioning servers outside the blade to minimize LAN traffic to the enclosure.
**D.** Include HP virtual Connect FlexFabric to connect to the HP StoreVirtual environment.
**Answer: A**

[email protected] Horizon View (formerly VMware View) is a virtual desktop infrastructure solution that simplifies desktop The customer is already an HP Blade System customer using HP Virtual Connect Flex-10 (Not It makes no sense answer D), HP Virtual Connect Flex-10 10Gb Ethernet Modules for c-Class BladeSystem simplify networks by reducing cables without adding switches to manage; They provide 4:1 consolidation of interconnect equipment: Each VC Flex-10 module can replace up to four Ethernet switches supporting data and iSCSI storage traffic.
A "boot storm" is the tremendous performance drain experienced when hundreds or thousands of users logon at, or near, the same time in VDI environments. The drag on network throughput, host performance and SAN I/O can be devastating to an unprepared VDI installation. Some of the pressure can be eased by building the environment according to some best practices laid out by virtualization vendors. But, there are a few areas that you might not have considered when constructing your VDI infrastructure.
