#### **NEW QUESTION: 1**

VM4 is configured with the following settings:

- A. Azure Logic App
- B. Azure Notification Hub
- C. Azure Event Grid
- D. Azure Service Bus

#### **Answer: C**

Explanation:

Explanation

Scenario: Create a workflow to send an email message when the settings of VM4 are modified.

You can start an automated logic app workflow when specific events happen in Azure resources or third-party resources. These resources can publish those events to an Azure event grid. In turn, the event grid pushes those events to subscribers that have queues, webhooks, or event hubs as endpoints. As a subscriber, your logic app can wait for those events from the event grid before running automated workflows to perform tasks - without you writing any code.

**NEW QUESTION: 4**

HOTSPOT

You have a database that contains both disk-based and memory-optimized tables.

You need to create two modules. The modules must meet the requirements described in the following table.

Which programming object should you use for each module? To answer, select the appropriate object types in the answer area.

**Answer:**

Explanation:

Explanation:

Module 1: Interpreted stored procedure

An interpreted stored procedure can access both disk-based and memory-optimized tables.

Module 2: Natively compiled stored procedure

Natively compiled stored procedures are Transact-SQL stored procedures compiled to native code that access memory-optimized tables. Natively compiled stored procedures allow for efficient execution of the queries and business logic in the stored procedure.
