NEW QUESTION: 2

Sie konfigurieren Azure AD Connect für Azure Active Directory Seamless Single Sign-On (Azure AD Seamless SSO) für ein lokales Netzwerk. Benutzer berichten, dass sie beim Versuch, auf `myapps.microsoft.com` zuzugreifen, mehrmals aufgefordert werden, sich anzumelden, und gezwungen sind, einen Kontonamen zu verwenden, der mit `onmicrosoft.com` endet.

Sie stellen fest, dass zwischen Azure AD und dem lokalen Active Directory eine UPN-Nichtübereinstimmung besteht. Sie müssen sicherstellen, dass die Benutzer Single Sign On (SSO) verwenden können, um auf Azure-Ressourcen zuzugreifen.

Was solltest du zuerst tun?

A. Fordern Sie im lokalen Netzwerk ein neues Zertifikat an, das den Active Directory-Domänennamen enthält.

B. Ändern Sie auf dem Server, auf dem Azure AD Connect ausgeführt wird, die Filteroptionen.

C. Stellen Sie im lokalen Netzwerk Active Directory-Verbunddienste (AD FS) bereit.

D. Fügen Sie in Azure AD einen benutzerdefinierten Domänennamen hinzu und überprüfen Sie ihn.

Answer: D

Explanation:

Azure AD Connect lists the UPN suffixes that are defined for the domains and tries to match them with a custom domain in Azure AD. Then it helps you with the appropriate action that needs to be taken. The Azure AD sign-in page lists the UPN suffixes that are defined for on-premises Active Directory and displays the corresponding status against each suffix. The status values can be one of the following:

State: Verified

Azure AD Connect found a matching verified domain in Azure AD. All users for this domain can sign in by using their on-premises credentials.

State: Not verified

Azure AD Connect found a matching custom domain in Azure AD, but it isn't verified. The UPN suffix of the users of this domain will be changed to the default `.onmicrosoft.com` suffix after synchronization if the domain isn't verified.

Action Required: Verify the custom domain in Azure AD.
