Answer: B

NEW QUESTION: 2

Which postings can be triggered by the settlement of a production order?(Choose three)

- A. Work in Process (WIP) to profitability analysis.
- B. Balance of the production order to FI.
- C. Variance categories to profit centers.
- D. Variance categories to profitability analysis.
- E. Work in Process (WIP) to FI.

Answer: B,D,E

NEW QUESTION: 3

Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2012 R2. Administrators use client computers that run Windows 8 to perform all management tasks. A central store is configured on a domain controller named DC1. You have a custom administrative template file named AppLadmx. AppLadmx contains application settings for an application named Appl. From a client computer named Computer1, you create a new Group Policy object (GPO) named GPO1. You discover that the application settings for Appl fail to appear in GPO1. You need to ensure that the Appl settings appear in all of the new GPOs that you create. What should you do?

- A. Copy AppLadmx to \\Contoso.com\SYSVOL\Contoso.com\Policies\PolicyDefinitions\.
- B. From the Default Domain Policy, add AppLadmx to the Administrative Templates.
- C. From the Default Domain Controllers Policy, add AppLadmx to the Administrative Templates.
- D. Copy AppLadmx to \\Contoso.com\SYSVOL\Contoso.com\StarterGPOs.

Answer: A

Explanation:

To take advantage of the benefits of .admx files, you must create a Central Store in the SYSVOL folder on a domain controller. The Central Store is a file location that is checked by the Group Policy tools. The Group Policy tools use any .admx files that are in the Central Store. The files that are in the Central Store are later replicated to all domain controllers in the domain.

NEW QUESTION: 4

A Machine Learning Specialist is required to build a supervised image-recognition model to identify a cat. The ML Specialist performs some tests and records the following results for a neural network-based image classifier:
Total number of images available = 1,000 Test set images = 100 (constant test set) The ML Specialist notices that, in over 75% of the misclassified images, the cats were held upside down by their owners.
Which techniques can be used by the ML Specialist to improve this specific test error?

- A. Increase the number of layers for the neural network.
- B. Increase the training data by adding variation in rotation for training images.
- C. Increase the number of epochs for model training.

D. Increase the dropout rate for the second-to-last layer.

Answer: D
