Answer:

Explanation:

See solution below.

Explanation

- Step 1: Open the Azure portal.
- Step 2: On the left menu, select All resources. You can sort the resources by Type to easily find your images.
- Step 3: Select the image you want to use from the list. The image page opens.
- Step 4: Select Create VM from the menu.
- Step 5: Enter the virtual machine information. Select VM1003a as the name for the first Virtual machine. The user name and password entered here will be used to log in to the virtual machine. When complete, select OK. You can create the new VM in an existing resource group, or choose Create new to create a new resource group to store the VM.
- Step 6: Select a size for the VM. To see more sizes, select View all or change the Supported disk type filter.
- Step 7: Under Settings, make changes as necessary and select OK.
- Step 8: On the summary page, you should see your image name listed as a Private image. Select Ok to start the virtual machine deployment.

Repeat the procedure for the second VM and name it VM1003b.

NEW QUESTION: 2

Which is the purpose of the Cisco NAC Profiler?

- A. learns and creates a database of virus definitions based on LAN traffic
- B. generates a profile based on username and group
- C. a database used to map user VPN accounts
- D. automates discovery and inventory of all LAN attached devices

Answer: D

Explanation:

Explanation/Reference:

Explanation:

Cisco NAC Profiler: Enables network administrators to keep a real-time, contextual inventory of all devices in a network. It greatly facilitates the deployment and management of Cisco Network Admission Control (NAC) systems by discovering and tracking the location and type of all LAN- attached endpoints, including those that are not capable of authenticating. It also uses the information about the device to determine the correct policies for NAC to apply.

NEW QUESTION: 3

Your online bookstore has customers connecting to a variety of Web servers to place or change orders and check order status. You ran penetration tests through the Security Gateway to determine if the Web servers were protected from a recent series of cross-site scripting attacks. The penetration testing indicated the Web servers were still vulnerable. You have checked every box in the Web Intelligence tab, and installed the Security Policy. What else might you do to reduce the vulnerability?

- A. The penetration software you are using is malfunctioning and is reporting a false-positive.
- B. Configure the Security Gateway protecting the Web servers as a Web server.
- C. Add Port (TCP 443) as an additional port on the Web Server tab for the host node.
- D. Check the Products / Web Server box on the host node objects representing your Web servers.

Answer: D

NEW QUESTION: 4

Which three statements are true regarding a multitenant deployment where each tenant managed its own infrastructure in vRealize Automation? (Choose three.)

- A.** Fabric administrators CANNOT create reservations for business groups in other tenants.
- B.** The system administrator is the only user who logs in to the default tenant to manage system-wide configurations and create tenants.
- C.** Each tenant has an IaaS administrator who could create fabric groups and appoint fabric administrators with their respective tenants.
- D.** Fabric administrators manage reservations only for the users in their own tenant.
- E.** Each tenant must provide its own infrastructure resources and CANNOT share a common infrastructure.

Answer: B,C,D
