The purchase procedures are simple and the delivery of our FOI6 study tool is fast, And the rest of the members check the FOI6 answers turn-by-turn.

NEW QUESTION: 1

A malicious user floods a switch with frames hoping to redirect traffic to the user's server.

Which of the following attacks is the user MOST likely using?

- A. Reflection
- B. DNS poisoning
- C. ARP poisoning

D. SYN attack

Answer: C

Explanation:

Address Resolution Protocol poisoning (ARP poisoning) is a form of attack in which an attacker changes the Media Access Control (MAC) address and attacks an Ethernet LAN by changing the target computer's ARP cache with a forged ARP request and reply packets. This modifies the layer -Ethernet MAC address into the hacker's known MAC address to monitor it. Because the ARP replies are forged, the target computer unintentionally sends the frames to the hacker's computer first instead of sending it to the original destination. As a result, both the user's data and privacy are compromised.

NEW QUESTION: 2

A colleague tells you that it is possible to pass results directly from one model in Algo Financial Modeler to another. Which file type would you reference to do this?

- A. wvu
- B. wvz
- C. wva
- D. wvr

Answer: D

NEW QUESTION: 3

Refer to the exhibit.

A network engineer is troubleshooting a NTP synchronized issue in CUCM. Why is NTP unsynchronized?

- A. A firewall is blocking NTP port 123.
- B. The NTP server stratum is higher than four.
- C. The NTP server used is a Windows based NTP server.
- D. The IOS Command NTP server 172.25.140.151 version 3 is advertising NTPv3.

Answer: D

NEW QUESTION: 4

A company developed a new application that is deployed on Amazon EC2 instances behind an Application Load Balancer. The EC2 instances use the security group named sg-application-servers. The company needs a database to store the data from the application and decides to use an Amazon RDS for MySQL DB instance. The DB instance is deployed in private DB subnet.

What is the MOST restrictive configuration for the DB instance security group?

- A. Only allow incoming traffic from the subnet of the

application servers on port 443.

B. Only allow incoming traffic from the sg-application-servers security group on port 3306.

C. Only allow incoming traffic from the sg-application-servers security group on port 443.

D. Only allow incoming traffic from the subnet of the application servers on port 3306.

Answer: C
