Our LSSA-YB study materials can exactly match your requirements and help you pass exams and obtain certificates.

NEW QUESTION: 1

Click the exhibit.

Considering that both routers C and D are advertising the eBGP learned prefix 10.5.0.0/16 into ISP X, which of the following best describes the route advertisement within ISP X?

- A. Router C sends the update to routers E and F only.
- B. Router C sends the update to routers A, B, E and F.
- C. Router C sends the update to routers D, E and F.
- D. Router C sends the update to routers A, B, D, E and F.

Answer: D

NEW QUESTION: 2

Answer:

Explanation:

NEW QUESTION: 3

View the following SQL statements:

Transaction T1

```
SQL> INSERT INTO hr.regions
2 VALUES (5, 'Pole');
3 COMMIT;
```

Transaction T2

```
SQL> UPDATE hr.regions
2 SET region_name='Poles'
3 WHERE region_id = 5;
4 COMMIT;
```

Transaction T3

```
SQL> UPDATE hr.regions
2 SET region_name='North and South Poles'
3 WHERE region_id = 5;
```

You want to back out transaction T2. Which option would you use?

- A. It is possible with the NOCASCADE_FORCE option.
- B. It is not possible because it has conflicts with transaction T3.
- C. It is possible, but transaction T3 also backs out.
- D. It is possible with the NONCONFLICT_ONLY option.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

Table 12-2 Flashback TRANSACTION_BACKOUT Options

CASCADE

Backs out specified transactions and all dependent transactions in a post-order fashion (that is, children are backed out before parents are backed out).

Without CASCADE, if any dependent transaction is not specified, an error occurs.

NOCASCADE

Default. Backs out specified transactions, which are expected to have no dependent transactions. First dependent transactions causes an error and appears in *_FLASHBACK_TXN_REPORT.

NOCASCADE_FORCE

Backs out specified transactions, ignoring dependent transactions. Server runs undo SQL statements for specified transactions in reverse order of commit times. If no constraints break and you are satisfied with the result, you can commit the changes; otherwise, you can roll them back.

NONCONFLICT_ONLY

Backs out changes to nonconflicting rows of the specified transactions. Database remains consistent, but transaction atomicity is lost.
