**NEW QUESTION: 1**

You have a System Center Service Manager 2010 Service Pack 1 (SP1) infrastructure that contains multiple servers.

The infrastructure contains the following:

- Multiple class workflows
- Custom Microsoft SQL Server Reporting Services reports
- Custom views of the System Center Service Manager Console
- Custom webpages on the Service Manager IT Analyst Self-Service Portal

You plan to upgrade to Service Manager 2012.

You need to identify which task must be performed after the planned upgrade.

What should you identify?

- A. Recreate the custom webpages.
- B. Recreate the custom workflows.
- C. Recreate the custom reports.
- D. Recreate the custom views.

**Answer: A**

Explanation:

<http://technet.microsoft.com/en-us/library/hh524327>

**NEW QUESTION: 2**

Which transceiver allows 40 GB Ethernet Connectivity by leveraging a single pair of multimode fibers?

- A. FET-40G
- B. QSFP-40G-SR-BD
- C. OSFP-H40G-CU
- D. OSFP-40G-SR4

**Answer: B**

Explanation:

**NEW QUESTION: 3**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration.

You need to ensure that all of the client computers in the domain perform DNSSEC validation for the fabrikam.com namespace.

Solution: From a Group Policy object (GPO) in the domain, you add a rule to the Name Resolution Policy Table (NRPT).

Does this meet the goal?

- A. No
- B. Yes

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

The NRPT stores configurations and settings that are used to deploy DNS Security Extensions (DNSSEC), and also stores information related to DirectAccess, a remote access technology.

Note: The Name Resolution Policy Table (NRPT) is a new feature available in Windows Server 2008 R2.

The NRPT is a table that contains rules you can configure to specify DNS settings or special behavior for names or namespaces. When performing DNS name resolution, the DNS Client service checks the NRPT before sending a DNS query. If a DNS query or response matches an entry in the NRPT, it is handled according to settings in the policy. Queries and responses that do not match an NRPT entry are processed normally.
