Amazon ElastiCache is a managed service that makes it easy to set up, operate, and scale in-memory caches in the cloud. It supports Redis and Memcached. When you create an ElastiCache instance, you specify a cache engine, a cache node type, and a cache subnet. The cache engine determines the software that runs on the cache nodes. The cache node type determines the hardware configuration of the cache nodes. The cache subnet determines the network configuration of the cache nodes. Amazon ElastiCache also supports a cache security group that you can use to control access to your cache instances. When you create a cache instance, you specify a cache security group. The cache security group controls access to the cache instance from other resources in your VPC. When you create a cache instance, you also specify a cache parameter group. The cache parameter group controls the configuration of the cache instance. When you create a cache instance, you also specify a cache engine, a cache node type, and a cache subnet.
