In intrablock corruption, the corruption occurs within the block itself and can be either physical or logical corruption. In interblock corruption, the corruption occurs between blocks and can only be logical corruption.

VALIDATE Command Output **> List of Control File and SPFILE.
File TYPE >>> SPFILE or Control File.

Status >>> OK if no corruption, or FAILED if block corruption is found.

Blocks Failing >>> The number of blocks that fail the corruption check. These blocks are newly corrupt.
