Answer: C

NEW QUESTION: 3

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You are the database administrator for a company that hosts Microsoft SQL Server. You manage both on-premises and Microsoft Azure SQL Database environments.

You have a user database named HRDB that contains sensitive human resources data. The HRDB backup files must be encrypted.

You need to grant the correct permission to the service account that backs up the HRDB database.

Which permission should you grant?

- A. sysadmin
- B. View Server State
- C. View Database State
- D. dbo
- E. View Definition
- F. DDLAdmin
- G. db_datawriter
- H. dbcreator

Answer: E

Explanation:

Explanation/Reference:

Explanation:

Restoring the encrypted backup: SQL Server restore does not require any encryption parameters to be

specified during restores. It does require that the certificate or the asymmetric key used to encrypt the backup file be available on the instance that you are restoring to. The user account performing the restore must have VIEW DEFINITION permissions on the certificate or key.

NEW QUESTION: 4

A backup of an Amazon DynamoDB instance is encrypted using an Amazon Key Management Service (KMS) customer managed key. The backup is restored to a new instance. Which of the following is true?

A. The new instance must be created with the same KMS key as the original instance.

B. The new instance must be created with the same KMS key as the original instance, and the backup must be restored to the new instance.

C. The new instance must be created with the same KMS key as the original instance, and the backup must be restored to the new instance, and the new instance must be created with the same KMS key as the original instance.

D. The new instance must be created with the same KMS key as the original instance, and the backup must be restored to the new instance, and the new instance must be created with the same KMS key as the original instance, and the backup must be restored to the new instance.

Answer: A

Explanation:

When you restore a backup of an Amazon DynamoDB instance that was encrypted using an Amazon Key Management Service (KMS) customer managed key, the new instance must be created with the same KMS key as the original instance.
