**NEW QUESTION: 3**

Azure Machine Learning

Studio is a web-based interface for creating and managing machine learning models. It provides a visual interface for building and training models, and for deploying them to production. It also provides a set of APIs for integrating with other services, such as Azure Data Lake Storage and Azure Machine Learning Workspace.

One of the key features of Studio is its ability to automatically tune hyperparameters for machine learning models. This is done using a technique called Hyperparameter Tuning (HPT). HPT allows you to specify a range of values for each hyperparameter, and Studio will automatically search for the best combination of values. This can significantly reduce the time and effort required to find the best model for your data.

**Answer:**

Explanation:

Explanation

Box 1: Boosted Decision Tree Regression

Mean absolute error (MAE) measures how close the predictions are to the actual outcomes; thus, a lower score is better.

Box 2:

Online Gradient Descent: If you want the algorithm to find the best parameters for you, set Create trainer mode option to Parameter Range. You can then specify multiple values for the algorithm to try.
