Answer: A,D

NEW QUESTION: 2

Which statement is true regarding the UNION operator?

- A.** By default, the output is not sorted
- B.** Names of all columns must be identical across all SELECT statements
- C.** The number of columns selected in all SELECT statements need to be the same
- D.** NULL values are not ignored during duplicate checking

Answer: C

Explanation:

The SQL UNION query allows you to combine the result sets of two or more SQL SELECT statements. It removes duplicate rows between the various SELECT statements. Each SQL SELECT statement within the UNION query must have the same number of fields in the result sets with similar data types.

NEW QUESTION: 3

Windows Communication Foundation (WCF) service will be hosted in Microsoft Internet Information Services (IIS).

You create a new application in IIS to host this service and copy the service DLL to the bin directory of the application.

You need to complete the deployment of this service to IIS. What should you do next?

- A.** Create an .asmx file and add a @Register directive to this file. Copy the file to the bin directory of the application.
- B.** Create a svc file and add a @ServiceHost directive to this file. Copy the file to the root of the application directory.
- C.** Create an asmx file and add a @ServiceHost directive to this file. Copy the file to the root of the application directory.
- D.** Create a .svc file and add a @Register directive to this file. Copy the file to the bin directory of the application.

Answer: B

Explanation:

Explanation/Reference:

How to: Host a WCF Service in IIS
(<http://msdn.microsoft.com/en-us/library/ms733766.aspx>)
"bin" deploy (preferred option)

- 1.compile your WCF service into a DLL (class library)
- 2.create a website in IIS6
- 3.copy the WCF DLL's into the website's .\bin folder
- 4.create a *.svc file in that website
- 5.add an appropriate web.config in the website folder to define your endpoints and service configuration etc.

Your WCF service will now be reachable at the website's base address, plus the name of the *.svc file, e.g.

<http://myserver/someweb/MyService.svc>

Your *.svc would look something like this:

```
<%@ ServiceHost Language="C#" Debug="true"
```

```
Service="WCF_Simple_Service. HelloIndigoService" %>
```

The Service= attributes denotes the class implementing the service - fully qualified with its namespace.
