we are your guides to a passing grade, and we're here to help you, Supportive for online and offline use for APP version, Using our HPE6-A71 study materials, you will just want to challenge yourself and get to know more.

**NEW QUESTION: 1**

What is the maximum number of routers that each OSPF area (including the backbone) should contain?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: B**

**NEW QUESTION: 2**

Which two functions can SIEM provide? (Choose Two)

- A. proactive malware analysis to block malicious traffic.
- B. centralized firewall management.
- C. event aggregation that allows for reduced log storage requirements.
- D. dual-factor authentication.
- E. Correlation between logs and events from multiple systems.

**Answer: C,E**

Explanation:

Explanation: + Log collection of event records from sources throughout the organization provides important forensic tools and helps to address compliance reporting requirements.

+ Normalization maps log messages from different systems into a common data model, enabling the organization to connect and analyze related events, even if they are initially logged in different source formats.

+ Correlation links logs and events from disparate systems or applications, speeding detection of and reaction to security threats.

+ Aggregation reduces the volume of event data by consolidating duplicate event records.

+ Reporting presents the correlated, aggregated event data in real-time monitoring and long-term summaries.

**NEW QUESTION: 3**

An enterprise runs 103 line-of-business applications on virtual machines in an on-premises data center. Many of the applications are simple PHP, Java, or Ruby web applications, are no longer actively developed, and serve little traffic. Which approach should be used to migrate these applications to AWS with the LOWEST infrastructure costs?

- A. Use AWS SMS to create AMIs for each virtual machine and run them in Amazon EC2.
- B. Use VM Import/Export to create AMIs for each virtual machine and run them in single-instance AWS Elastic Beanstalk environments by configuring a custom image.
- C. Convert each application to a Docker image and deploy to a small Amazon ECS cluster behind an Application Load Balancer.
- D. Deploy the applications to single-instance AWS Elastic Beanstalk environments without a load balancer.

**Answer: C**

Explanation:

Using ECS with Application Load Balancer would allow the multiple applications to be hosted within the same container, thereby reducing the number of instances required for deployments.
