We care for your condition and hence We at Tinova-Japan, are working hard to provide you with the best and finest Tinova-Japan VMCA2022 exam preparation material which not only increase enough knowledge to make you well aware with the test but also assure you a Tinova-Japan VMCA2022 exam success in the first try.

In order to meet all candidates requirement, we compiled such high quality VMCA2022 study materials to help you, More than 50,000 Satisfied Customers, Make sure that you are focusing [VMCA2022](#) on using all modes of the questions pdf so you can handle things in the right way.

## **VMCA2022 Actual Exam & VMCA2022 Study Materials & VMCA2022 Test Torrent**

Our assiduous pursuit for high quality of our VMCA2022 exam prep creates our top-ranking VMCA2022 test guide and constantly increasing sales volume, You can more easily master and simplify important test sites with VMCA2022 learn torrent.

We at Tinova-Japan offers detailed PDF files for the preparation of VMCA 2022 [VMCA 2022](#) exam, After this time, when the 90 days are over, you will be able to extend the validity of your product by following the link in your Member's Area.

Have any doubt about Exam Dumps, You just need to send **Valid VMCA2022 Exam Forum** us the failure scanned, and we will replace the exam dumps or return your money to you, Get the test VMCA2022 certification requires the user to have extremely high concentration will all test sites in mind, and this is definitely a very difficult.

Thus you can interactively prepare for real Veeam VMCA2022 exam with actual Azure Administrator Associate exam question, We not only provide you professional the latest version of VMCA2022 test simulator but also unconditional 100% money back guarantee.

Each user's situation is different, Our VMCA2022 exam preparation can help you improve your uniqueness.

### **NEW QUESTION: 1**

Your network contains a server named Server1 that runs Windows Server 2008 R2. Server1 has the Remote Desktop Gateway (RD Gateway) role service installed.

You add the Domain Users group to a connection authorization policy named TS\_CAP\_01.

You need to ensure that only client computers that have Windows Firewall enabled can connect to Remote Desktop resources through the RD Gateway.

What should you do?

- A.** From Remote Desktop Gateway Manager, modify the properties of the TS\_CAP\_01 connection authorization policy.
- B.** From the Network Policy Server console, modify the properties of the TS\_CAP\_01 network policy.
- C.** From Remote Desktop Gateway Manager, modify the properties of the TS\_RAP\_01 resource authorization policy.
- D.** From the Network Policy Server console, modify the

properties of the TS GATEWAY AUTHORIZATION POLICY connection request policy.

**Answer: B**

Explanation:

[http://technet.microsoft.com/en-us/library/cc754252\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc754252(v=ws.10).aspx)

1. Install the TS Gateway role service

Follow these steps to install the TS Gateway role service.

Optionally, during the role

service installation process, you can select an existing certificate (or create a new self-

signed certificate), and you can create a TS CAP and a TS RAP.

To install the TS Gateway role service

Open Server Manager. To open Server Manager, click Start, point to Administrative Tools,

and then click Server Manager.

If the Terminal Services role is not already installed:

In Server Manager, under Roles Summary, click Add roles.

In the Add Roles Wizard, if the Before You Begin page appears, click Next. This page will

not appear if you have already installed other roles and you have selected the Skip this

page by default check box.

On the Select Server Roles page, under Roles, select the Terminal Services check box,

and then click Next.

On the Terminal Services page, click Next.

On the Select Role Services page, in the Role services list, select the TS Gateway check

box.

If prompted to specify whether you want to install the additional role services required for

TS Gateway, click Add Required Role Services.

On the Select Role Services page, confirm that TS Gateway is selected, and then click

Next.

If the Terminal Services role is already installed:

Under Roles Summary, click Terminal Services.

Under Role Services, click Add Role Services.

On the Select Role Services page, select the TS Gateway check box, and then click Next.

If prompted to specify whether you want to install the additional role services required for

TS Gateway, click Add Required Role Services.

On the Select Role Services page, click Next.

On the Choose a Server Authentication Certificate for SSL Encryption page, specify

whether to choose an existing certificate for SSL encryption (recommended), create a self-

signed certificate for SSL encryption, or choose a certificate for SSL encryption later. If you

are completing an installation for a new server that does not yet have certificates, see 2.

Obtain a certificate for the TS Gateway server for certificate requirements and information about how to obtain and install a certificate. Under the Choose an existing certificate for SSL encryption (recommended) option, only certificates that have the intended purpose (server authentication) and Enhanced Key Usage (EKU) [Server Authentication (1.3.6.1.5.5.7.3.1)] that are appropriate for the TS Gateway role service will appear in the list of certificates. If you select this option, click Import, and then import a new certificate that does not meet these requirements, the imported certificate will not appear in the list. On the Create Authorization Policies for TS Gateway page, specify whether you want to create authorization policies (a TS CAP and a TS RAP) during the TS Gateway role service installation process or later. If you select Later, follow the procedures in 4. Create a TS CAP for the TS Gateway server to create this policy. If you select Now, do the following: On the Select User Groups That Can Connect Through TS Gateway page, click Add to specify additional user groups. In the Select Groups dialog box, specify the user group location and name, and then click OK as needed to check the name and to close the Select Groups dialog box. To specify more than one user group, do either of the following: Type the name of each user group, separating the name of each group with a semi-colon; or add additional groups from different domains by repeating the first part of this step for each group. After you finish specifying additional user groups, on the Select User Groups that Can Connect Through TS Gateway page, click Next. On the Create a TS CAP for TS Gateway page, accept the default name for the TS CAP (TS\_CAP\_01) or specify a new name, select one or more supported Windows authentication methods, and then click Next. On the Create a TS RAP for TS Gateway page, accept the default name for the TS RAP (TS\_RAP\_01) or specify a new name, and then do one of the following: Specify whether to allow users to connect only to computers in one or more computer groups, and then specify the computer groups; or specify that users can connect to any computer on the network. Click Next.

On the Network Policy and Access Services page (which appears if this role service is not already installed), review the summary information, and then click Next.

On the Select Role Services page, verify that Network Policy Server is selected, and then click Next.

On the Web Server (IIS) page (which appears if this role service is not already installed), review the summary information, and then click Next.

On the Select Role Services page, accept the default selections for Web Server (IIS), and then click Next.

On the Confirm Installation Options page, verify that the following roles, role services, and features will be installed:

Terminal Services\TS Gateway

Network Policy and Access Services\Network Policy Server

Web Server (IIS)\Web Server\Management Tools

RPC over HTTP Proxy

Windows Process Activation Service\Process Model\Configuration APIs

Click Install.

On the Installation Progress page, installation progress will be noted.

If any of these roles, role services, or features has already been installed, installation progress will be noted only for the new roles, role services, or features that are being installed.

On the Installation Results page, confirm that installation for these roles, role services, and features was successful, and then click Close.

## **NEW QUESTION: 2**

- A.** HTTP
- B.** SMTP
- C.** SFTP
- D.** POP
- E.** SSH

**Answer: A,E**

Explanation:

Explanation: Following are the management protocols that the MPP feature supports.

These management protocols are also the only protocols affected when MPP is enabled.
