Answer: D

Explanation:

Explanation

As an administrator of the master account of an organization, you can restrict which AWS services and individual API actions the users and roles in each member account can access. This restriction even overrides the administrators of member accounts in the organization. When AWS Organizations blocks access to a service or API action for a member account a user or role in that account can't access any prohibited service or API action, even if an administrator of a member account explicitly grants such permissions in an IAM policy. Organization permissions overrule account permissions.

Option B is invalid because service policies cannot be assigned to the root account at the account level.

Option C and D are invalid because IAM policies alone at the account level would not be able to suffice the requirement For more information, please visit the below URL

id=docs_orgs_console
<https://docs.aws.amazon.com/IAM/latest/UserGuide/manage-attach-policy.html>

The correct answer is: Create a Service Control Policy that denies access to the services. Assemble all production accounts in an organizational unit. Apply the policy to that organizational unit Submit your Feedback/Queries to our Experts

NEW QUESTION: 3

A company has 10 on-premises SQL databases. The company plans to move the databases to SQL Server 2012 that runs in Azure Infrastructure-as-a-Service (IaaS). After migration, the databases will support a limited number of Azure websites in the same Azure Virtual Network.

You have the following requirements:

- * You must restore copies of existing on-premises SQL databases to the SQL servers that run in Azure IaaS.
- * You must be able to manage the SQL databases remotely.
- * You must not open a direct connection from all of the machines on the on-premises network to Azure.
- * Connections to the databases must originate from only five Windows computers.

You need to configure remote connectivity to the databases. Which technology solution should you implement?

- A. Azure Virtual Network site-to-site VPN
- B. Azure ExpressRoute
- C. Azure Virtual Network multi-point VPN
- D. Azure Virtual Network point-to-site VPN

Answer: D

Explanation:

A point-to-site VPN would meet the requirements.
