We undertake all responsibilities throughout the services, so once you buy DP-900 top quiz materials from us.

NEW QUESTION: 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to ensure that authentication events are triggered and processed according to the policy. Solution:

Create separate Azure Event Grid topics and subscriptions for sign-in and sign-out events.

Does the solution meet the goal?

A. Yes

B. No

Answer: B

NEW QUESTION: 2

When restoring System State on a live Windows web server, what must happen for the system state to take effect?

- A. reboot the server after restore of system state
- B. restore system state in Directory Services Restore mode
- C. reboot the server before the restore of system state
- D. restore system state in Safe mode

Answer: A

NEW QUESTION: 3

Your company has a main office and 20 branch offices in North America and Europe. Each branch office connects to the main office by using a WAN link. All the offices connect to the Internet and resolve external host names by using the main office connections.

You plan to deploy Microsoft 365 and to implement a direct Internet connection in each office.

You need to recommend a change to the infrastructure to provide the quickest possible access to Microsoft 365 services.

What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal.

Select the BEST answer.

- A. In each branch office, configure name resolution so that all external hosts are redirected to public DNS servers directly.
- B. In each branch office, deploy a proxy server that has user authentication enabled.
- C. In each branch office, deploy a firewall that has packet inspection enabled.
- D. For all the client computers in the branch offices, modify the MTU setting by using a Group Policy object (GPO).

Answer: A

Explanation:

Explanation

Being a cloud service, Office 365 would be classed as an external host to the office computers.

All the offices connect to the Internet and resolve external host names by using the main office connections.

This means that all branch office computers perform DNS lookups and connect to the Internet over the WAN link.

Each branch office will have a direct connection to the Internet so the quickest possible access to Microsoft 365 services would be by using the direct Internet connections. However, the DNS lookups would still go over the WAN links to main office. The solution to provide the quickest possible access to Microsoft 365 services is to configure DNS name resolution so that the computers use public DNS servers for external hosts. That way DNS lookups for Office 365 and the connections to Office 365 will use the direct Internet connections.
